

# Case Study

## Insurance

Trees under the ownership of 3<sup>rd</sup> parties occasionally collapse. Whilst this may have been in high winds usually the tree also has evidence of stem or root decay. Almost always this could have been identified prior to the event if an appropriate inspection had been undertaken.

## Our Inspection

Even if the tree has been completely removed there is likely to be value in our site inspection. Certain fungi leave 'evidence' in the surrounding soil. In all cases we are able to give an opinion on the potential cause of failure.

## Fast Turnaround

We inspect the site and remaining parts of the tree and provide a summary of the probable cause of failure and whether this was foreseeable.

“When our neighbour’s tree collapsed across our garden we were unsure where we stood. Our insurers instructed Tamla Trees to inspect the tree and they were able to pinpoint the exact cause of failure”.
