

# Case Study

## Tree Risk Management

An HSE compliant zoned tree survey for a major landowner. The survey identified high (red) medium (blue) and low risk use areas where trees were present. This drives frequency of re-inspection.

## Tree Removal

Only the trees to be removed appear as individuals on the site plan (indicated above as red and marked on site to ease identification by contractors).

## Fast Turnaround

From instruction to production of the plan and competitive tendering of the tree works took 15 working days.

“A fast, efficient and confidence building survey”.
